EN 9100 certification certifies process reliability

Suitably to the 30th company jubilee the electronics manufacturer from Geseke is pleased about the certification according to EN 9100:2009.

After intensive audit days at the beginning of 2016, the companies Heicks Industrieelektronik GmbH and Heicks Parylene Coating GmbH were distinguished by the TÜV Nord CERT GmbH with the certificate of the aerospace industry DIN EN ISO 9001 / EN / AS9100.

The series of EN 9100 standards confirms a comprehensive quality management system as a supplier of the aerospace industry. Already for many years the processes within manufacturing and the internal processes were confirmed by the demands of the aerospace industry by the customers of company Heicks. With the certification, this is now certified universal and customized independently.

With it another milestone of the long-standing EMS service provider was reached in the domain of aerospace industry.

Company Heicks is the only service provider in Germany, that manufactures electronic assemblies according to aviation standard, coats these assemblies with Parylene and is able to selectively unmask bonding sites or pads with laser. The customer can receive the complete circuit board / assembly including Parylene coating up to the device assembly, as well as the Parylene coating as a single service offer from Heicks. Together with the customer, customized solutions can be developed and implemented.

Today the Heicks Group stands for innovative and high-quality solutions, among other things for aerospace, medicine, automotive and industrial electronics. It is produced on more than 6,000m² with more than 120 employees.

Caption: Rudolf Heicks (owner and manager) and Stephan Swat (authorized representative and quality manager) are pleased about the successful certification according to DIN EN ISO 9001 / EN / AS 9100.
